Name:

Question 1: Let $\Sigma = \{a, b\}$. Consider the following languages.

$$L1 = \{w \in a^n b^{n+1}, n > 0\}$$

$$L2 = \{w: \text{an even length palindrome}\}$$

$$L3 = \{w \in \{a, b\}^*: \text{a string of } W\#W^R, R \text{ means Reverse}\}$$

$$L4 = \{w \in a^n b^{2^n} c^m, n \geq 0\}$$

Construct a Turing Machine that recognizes: **a) L1, b) L2, c) L3, d) L4** [5x1 points]

Thank you for letting me be a part of your journey, wishing you all success and happiness.
